Visa Status: Seeking UK Skilled Worker Visa Sponsorship | Open to Relocation

DATA ANALYST | PYTHON | SQL | DATA PIPELINES | TRANSITIONING INTO DATA SCIENCE

Data Analyst with experience working on large-scale operational and demand-driven datasets in high-volume e-commerce environments. Skilled in Python (Pandas, NumPy), SQL, and building end-to-end data pipelines to support near real-time decision-making.

Experienced in aligning demand and operational data, developing scalable reporting systems, and transforming complex datasets into actionable insights that improve business performance. Strong background in cross-functional collaboration within Agile environments.

Currently expanding into predictive modelling and time-series analysis, with a focus on building production-ready data solutions and applying predictive and analytical techniques to real-world problems.

Seeking UK-based Data Analyst / Data Scientist roles where I can apply data-driven decision-making and predictive analytics.

KEY COMPETENCIES

- Python (Pandas, NumPy) - SQL & Data Querying - Data Pipelines & Automation - Data Analysis & Visualisation (Power BI) - Predictive Modelling (Basic) - Time-Series Analysis (Learning)	- ERP Data Integration (SAP MM/SD, Nebim) - KPI & Performance Analytics - Demand & Operational Data Alignment - Cross-Functional Collaboration (Agile)
--	--

WORK EXPERIENCE

Operations Data Analyst – E-commerce Operations Present Vicco Istanbul, Turkey On-site, International E-commerce Operations - Designed and implemented a SKU-level Stock Health & Availability Analytics Model covering 1000+ active SKUs, significantly improving inventory risk visibility across warehouse operations. - Developed Days of Supply (DOS) calculations and stock risk classification (Healthy / Risk / Critical), enabling proactive identification of low-stock exposure. - Built automated low-stock alert logic by analysing demand patterns, supporting data-driven replenishment planning and reducing potential stock-out risk. - Integrated Google Ads & GA4 demand data with real-time Nebim ERP inventory data, strengthening demand-stock alignment between marketing and operations teams. - Developed end-to-end data pipelines (SQL → Python → Power BI), enabling near real-time data processing and scalable decision-making systems. - Applied data-driven and predictive approaches to analyse demand patterns and simulate alternative scenarios, improving decision-making and performance outcomes. - Enhanced cross-department decision-making through data-driven insights and structured performance reporting.	Aug 2023 –
--	-------------------

Business Analyst & Project Coordinator Intern (International Project)

Jan 2026 – Present

Freedom House System | Remote (Canada-Based International Project) International Project Reference Letter Available Upon Request

Affordable housing SaaS platform designed to improve housing accessibility for vulnerable and homeless individuals.

- Led Agile coordination of cross-functional international team (development, UI/UX, database, testing), ensuring structured sprint planning and milestone delivery.
- Translated housing access requirements into structured user stories, backlog prioritisation, and MVP-aligned roadmap
- Designed AS-IS / TO-BE workflows, use cases, and process documentation supporting scalable platform architecture.
- Established KPI tracking and reporting framework to monitor module readiness and delivery performance.
- Improved alignment between technical and functional stakeholders, reducing delivery ambiguity and increasing structured execution.
- Supported documentation and process preparation for funding-readiness initiatives.
- Worked with structured data and system logic to support scalable and data-driven decision-making processes.

Operations Data & Reporting Intern (International Project)
2026

Oct 2025 – Jan

MindArk.ai (USA) | Remote, United States (Based International Project) | CEO-Signed Reference Letter Available upon Request

Knowledge-capture and onboarding intelligence platform operating across international markets.

- Collected and structured Denmark-region operational datasets to support regional performance analytics.
- Performed Python-based data cleaning, transformation, and exploratory analysis (Pandas, NumPy), improving reporting accuracy and dataset consistency.
- Analysed datasets to identify patterns and generate insights supporting data-driven decision-making.
- Applied aggregation logic and KPI calculations to evaluate onboarding workflows and operational efficiency.
- Automated dataset preparation processes, reducing manual reporting effort and increasing analysis efficiency.
- Built Power BI dashboards visualising key operational KPIs, enhancing management visibility and data-driven decision support.
- Contributed analytical insights supporting process optimisation and data-driven improvements within an international SaaS environment.

Performance Data Specialist – Inventory & ERP Reporting
Abluka | Istanbul, Turkey | Hybrid / International Client Projects

Dec 2022 – Jul 2023

- Analysed inventory and demand data across 2000+ SKUs to identify patterns and support data-driven decision-making.
 - Developed structured stock monitoring reports supporting purchasing and replenishment decisions.
 - Identified slow-moving and fast-moving inventory trends to optimise stock turnover and planning accuracy.
 - Enhanced warehouse reporting visibility and ERP data accuracy across commercial teams.
 - Applied analytical techniques to evaluate stock trends and support optimisation of inventory planning and replenishment processes.
-

- Supported data-driven operational reporting and performance monitoring, improving visibility of key business metrics.
- Prepared and maintained structured KPI reports, contributing to more accurate and data-driven decision-making.
- Analysed operational data to support reporting accuracy and improve decision-making processes.
- Tracked workflows and documented processes to enhance consistency and data reliability across operations.
- Assisted cross-functional teams with reporting and analysis, supporting process optimisation initiatives.
- Contributed to improving data accuracy and reporting quality across multiple business functions.

EDUCATION & CERTIFICATIONS

- Google Data Analytics Professional Certificate – Google 2025
- Data Science & Operational Analytics (Python & Power BI) – Europe Coding School 2025
- Business Analysis & Project Management – Europe Coding School 2025
- Microsoft Excel for Data Analysis & Operational Reporting – Microsoft 2025
- IBM Introduction to Data Analytics – IBM 2025
- SAP ERP MM & SD Modules (Warehouse & Logistics Training) – Europe Coding School 2021
- Supply Chain Logistics – Rutgers University (Coursera) 2026
- Warehouse & Health & Safety Certifications – Alison 2026
 - Diploma in Warehouse Management
 - Health & Safety at Work
 - Manual Handling Safety Training
